

Best practices coding EwE6

Target processor

To date, Microsoft has not updated its Access drivers, the core drivers that EwE6 needs to use its database, to 64-bit. EwE6 and ANY EWE6 PLUG-IN must be compiled at ANY TIME for 32 bit processors. Set all applications to build for x86 processors via: Menu > Build > Configuration Manager > x86 (new if not listed). See [?image](#).

Nasty experiences

- Issue [#702](#): always override Dispose(bDisposing) to clean up controls, do not (smartly) use [OnHandleDestroyed?](#).
