Getting started with the EwE sources

EwE is free software: you can redistribute it and/or modify it under the terms of the GNU General Public License version 2 as published by the Free Software Foundation (?http://www.gnu.org/licenses/gpl-2.0.html).

EwE is distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU General Public License for more details.

Please write us an email to request access to the sources, stating ***why and how*** you would use the sources. We will then send you a user name and password back for connecting to our SVN server.

- System requirements - What computers can run the EwE source code?
- Download sources from SVN - Download the EwE sources from our central SVN server.
- Install Visual Basic Express - Visual Basic Express is the development environment that we use to program EwE. This is required if you want to program or look into the source code of EwE.
- Install Access drivers - Make sure your system has the Access 2007 drivers installed that EwE needs.
- Loading and compiling the Ecopath source code - This section describes how to run the scientific interface from the sources.

If you are somehow not able to run SVN (for instance due to a company policy) you can download a zip file with the latest EwE source code ?here.
