

Errors on Dao.DBEngine

If the core fails to compile on Dao.DBEngine, your system does not have the Microsoft Office 2007 interoperability assemblies installed that are needed to compact ACCDB databases. These assemblies are installed with Microsoft Office. You can:

- Install Microsoft Office

OR

- Download the **Redistributable Primary Interop Assemblies** from [?Microsoft](#) and install these separately.

BadImageFormatException was unhandled

This exception indicates a corrupted build environment. Perform the following:

- **Build > Clean solution**
- **Close Visual Studio**
- manually **delete** any *obj* and *bin* folders from the sources folder tree.

InvalidOperationException was unhandled

A possible cause for this exception is a 64-bit incompatibility problem with the .NET and the Microsoft Access drivers. To overcome this problem, EwE6 must be compiled for 32 bit processors. Do the following:

- Select Build menu > Configuration Manager
- Select Active Platform to **x86** (new if not listed). See [?image](#).

SVN Issues

MKactivity 403 forbidden - If you get this error, you'll have to ensure the SVN root is ok. To fix this, Select SVN>Relocate and ensure the case sensitivity is accurate for the SVN URL.
