

## Using SVN - step by step

For instance, if you use TortoiseSVN you can get the sources via the following steps:

- i. Create a folder on your machine in a location where you have write access, such as in your documents folder or on your desktop.
- ii. Right-click this new folder, and select *SVN Checkout...*

Tortoise SVN will now show a form where you specify which sources you'd like to get.

- i. Enter the SVN repository URL to the Ecopath6 sources, which is *http://sources.ecopath.org/svn/Ecopath/trunk/Ecopath6*
- ii. Click *OK*

Tortoise SVN will now prompt you for your username and password if you have not entered this before.

- i. When prompted, enter the username and password that we gave you.

TortoiseSVN will now start downloading the source code.
